

# ALPHA MOBILE

**ALPHA MOBILE** is a handheld GPS high sensitivity receiver that includes also a GSM/GPRS transmitter on it. With a very small size it can be used to locate people and objects in real time without installation needed, only by carrying it.

Main features:

- **PANNIC BUTTON:** it generates an alarm to control center, in real time, sending GPS location and allowing to talk with the preprogrammed phone to give more details about what it is happening.
- It can be programmed to send GPS location in a certain moment or it can generate data transmission if the device gets or leaves a forbidden area
- High capacity battery.
- It can be customized depending on customers requirements.

Security personnel, alzheimer patients, elder people, disabled persons, wheel-chair patients, emergency, sports, objects tracking...
